

EURODECISION & INCONTROL combine strength

Tuesday, May 17th 2011

We are proud to announce the French company EURODECISION and the Dutch software company INCONTROL Simulation Solutions started a partnership to improve the use of simulation software in operational research in the French market.

EURODECISION provides organizations with an end-to-end offer to create decision-support solutions for Supply Chain, Production, Human Resources, Product Design and Revenue Management, by means of advanced technologies in Operational Research and Applied Mathematics. Solutions are provided to such companies as Air France, Airbus, EDF, RATP, Renault, SNCF and Total. With offices in Versailles, Toulouse, and Barcelona, EURODECISION is one of the most active players in operational research and optimization in France and Spain.

INCONTROL Simulation Solutions is the number one manufacturer of enterprise resource simulation software. The Enterprise Dynamics platform is the most innovative product available. Clients use Enterprise Dynamics simulation software to simulate large scale logistic systems and infrastructures such as baggage handling systems, container terminals, train stations, assembly lines and football stadiums. Enterprise Dynamics enables to cope with time, costs, resources, reliability, safety and sustainability. Via offices in The Netherland, Germany, China and a worldwide partner network, simulation solutions are provided at leading companies worldwide.

By combining the knowledge of operational research and simulation software EURODECISION & INCONTROL will create synergy in consultancy projects. Complete solutions with software development & implementation, project management and consultancy are offered in the following areas of expertise:

- Airport
- Rail & Public transport
- Supply Chain Management
- Logistics & Manufacturing
- Crowd Management
